Guide d’installation Symfony

Environnement WSL avec Symfony 7.4 (LTS)

Prérequis :

- WSL avec Ubuntu 22.04
- PHP 8.2 minimum
- Composer
- Symfony CLI

Installation de PHP 8.3 :

- sudo apt install -y software-properties-common
- sudo add-apt-repository ppa:ondrej/php
- sudo apt update
- sudo apt install -y php8.3 php8.3-cli php8.3-xml php8.3-curl php8.3-mbstring php8.3-zip php8.3-intl php8.3-mysql
- sudo update-alternatives --set php /usr/bin/php8.3

Vérifier avec php –v, vous devez avoir 8.3.30

```
nicolas@MUSS:~$ php -v
PHP 8.3.30 (cli) (built: Feb 13 2026 15:58:45) (NTS)
Copyright (c) The PHP Group
Zend Engine v4.3.30, Copyright (c) Zend Technologies
    with Zend OPcache v8.3.30, Copyright (c), by Zend Technologies
```

Installation de Symfony CLI :

- curl -1sLf 'https://dl.cloudsmith.io/public/symfony/stable/setup.deb.sh' | sudo -E bash
- sudo apt install symfony-cli

Vérifiez avec symfony version

```
nicolas@MUSS:~$ symfony version
Symfony CLI version 5.16.1 (c) 2021-2026 Fabien Potencier (2025-11-25T07:30:20Z - stable)
```

Et enfin, vérifions ensemble que tout fonctionne bien avec la commande

symfony check:requirements

```
nicolas@MUSS:~$ symfony check:requirements
*
Symfony Requirements Checker
~~~~~~~~~~~~~~~~~~~~~~~~~~~~

> PHP is using the following php.ini file:
/etc/php/8.3/cli/php.ini

> Checking Symfony requirements:

.............................

 [OK]
 Your system is ready to run Symfony projects

Note  The command console can use a different php.ini file
~~~~  than the one used by your web server.
      Please check that both the console and the web server
      are using the same PHP version and configuration.
```
